PERFORCE HELIX

THE VERSION MANAGEMENT YOU LOVE JUST GOT BETTER

DVCS **+** Threat Detection **+** Git Management **+** Freemium Cloud Edition
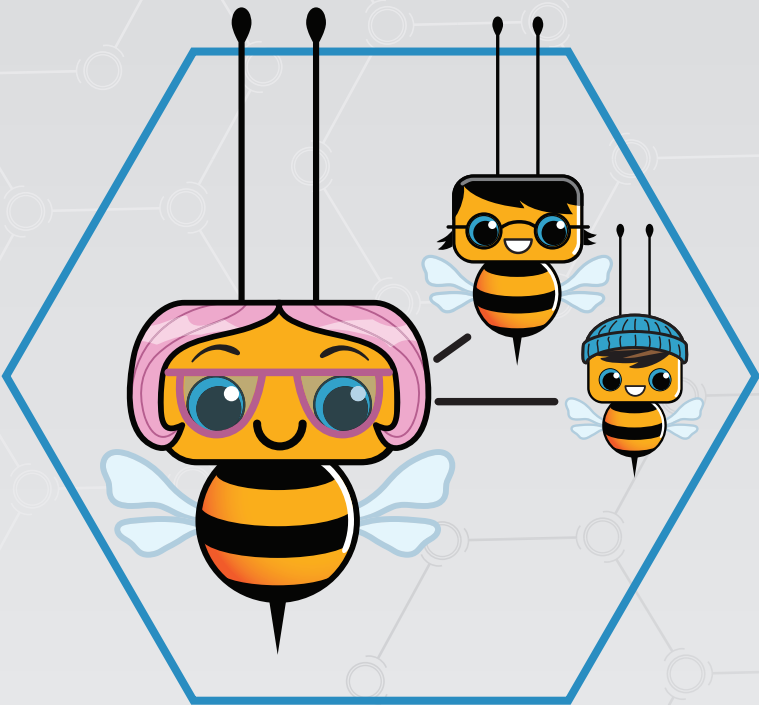

Perforce Helix is a powerful new collaboration platform for building complex products.

Built on Perforce's world-renowned versioning engine (P4D), Helix serves as a single source of truth for all types of project contributors and files—including source code, CAD files, multimedia, environment artifacts… the list goes on.

- Software developers like its native distributed version control and integrated Git ecosystem
- Artists and designers appreciate "save it and you're done" file synchronization
- Security teams value its sophisticated theft detection and fine-grained access control
- Choose between on-premise and hosted editions

Connect teams, protect IP, support a thriving business. With Perforce Helix.
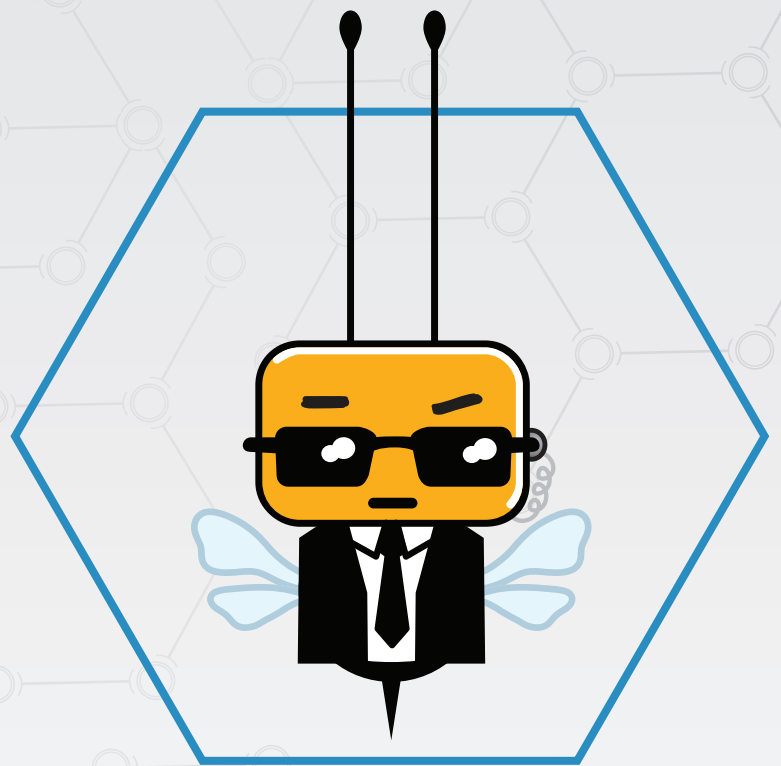

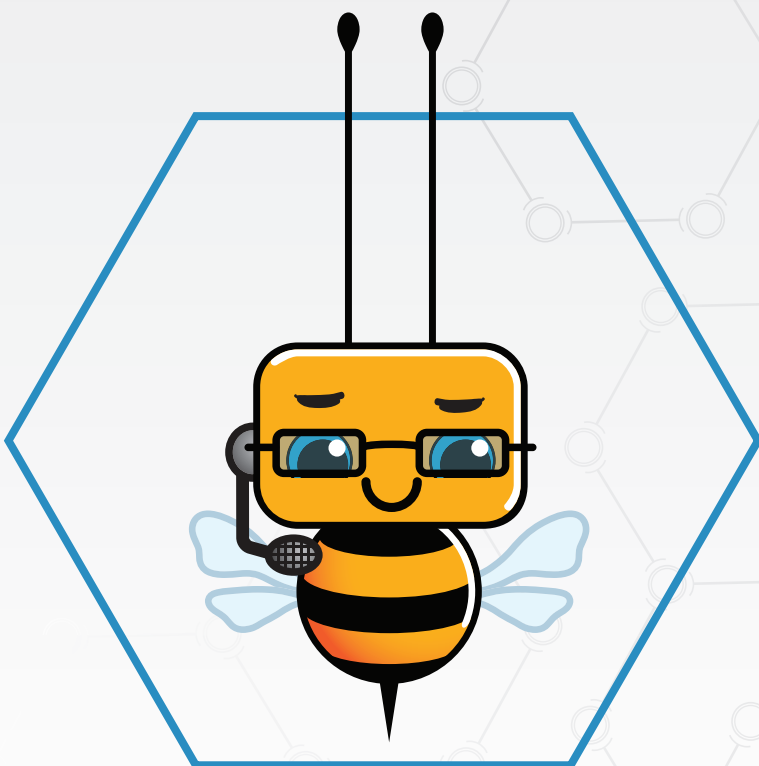

Connect

If your code is in one place, your artwork in another, your multimedia in a third, your environment artifacts in yet another, you likely know how dicey things can get.

Helix solves this by letting **ALL** the people working on a product collaborate within a single, flexible platform. That means everyone knows where to get the latest and greatest. Your teams collaborate more effectively. And your products go out the door better and faster.

Protect

File-level access control lets you designate who can get to what. Advanced behavioral analytics ride herd over all your assets and let you know if anything fishy takes place. You'll see if an account has been compromised, which projects are at risk, who's being naughty and nice.

Support

Helix can take it—heavily automated environments, tens of 1,000s of users, tens of 1,000,000s of transactions a day, terabytes of data… you name it. Built to support rapid release cycles and geographically distributed teams, Helix's performance and reliability is proven daily at Fortune 100 companies the world over.

Helix will soon be available for general consumption.
